

JUNIOR SOFTWARE DEVELOPER(S)

Signatur ITS is in the ITS sector, i.e. the industry developing products/systems based on information and communication technologies mainly for use in road traffic/transport. Our main technology focus is on imaging with the use of classical methods and increasingly AI / Artificial Neural Networks (ANN) technologies. Customers are both private and public, like parking operators, road tolling companies and public entities responsible for automatic traffic control. We do a lot of R&D and have presently two on-going projects developing world class innovations.

Our company needs to add more staff to pursue exciting opportunities at home in Norway and abroad. We have very competent senior personnel and now we want to recruit employees with the right educational background but have little or no work experience.

The competence we are looking for is with areas such as:

- *algorithm development*
- *Python*
- *image analysis*
- *AI / machine learning / neural net-teknologi*
- *Numpy / Scipy*
- *SQL / SQLite*
- *OpenCV*
- *Linux / Windows / Cloud solutions*
- *Git*
- *AWS*

As an employee in Signatur ITS you will work closely with end products and influence the choice of methods and solutions. Contact with customers' representatives is also common. This can be challenging, but also very satisfying.

We hope new employees will contribute to the development of our work environment at our offices in Oslo city center or in Kongsvinger, but other locations can be discussed.

For more information about the company, contact CEO Geir H. Torp (geir.h.torp@signatur-its.com).

For more information about work content, working environment, etc., contact Software Developer Patrik G. Olsen (patrik@signatur-its.com).
